INDEX

Actinomycetes, microscopic method for demonstrating, 149–151
Actinomycetes scabies, effect of soil reaction on, 61–79
Adsorption—
of salts by soil colloids, 1–7
of Plant Food by Colloidal Silica (paper), R. C. Wiley and N. E. Gordon, 441–448
of Plant Food by Soil Colloids, Influence of Hydrogen-Ion Concentration on the (paper), E. B. Starkey and N. E. Gordon, 449–457
Albrecht, W. A. (paper), Nitrate Accumulation under Straw Mulch, 299–305
Ali B. Wilsdon, B. H. and (paper), Nitrogen Fixation in Arid Climates, 127–133
Alkali soil, variability of, 177–189
Ammonification—
in soil, effect of petroleum on, 465–477
Arrhenius O. (paper), A Possible Correlation between the Fertility of Rice Soils and their Titration Curves, 21–26
Arrhenius, O. (paper), The Potential Acidity of Soils, 223–232
Arsenic, Some Relations of, to Plant Growth: Part I (paper), John Stewart, 111–117
solubility of lead arsenate—
in salt solutions, 113–115
in soil solution, 115–118
Arsenic, Some Relations of, to Plant Growth: Part 2 (paper), John Stewart, 119–126

Bacteria, nodule—
movement of, in soil, 29–35
effect of, on peas, 413–415
Baldwin, I. L. (paper), Modifications of the Soil Flora Induced by Applications of Crude Petroleum, 465–477
Blair, A. W., and Prince, A. L. (paper), Variation of Nitrate Nitrogen and pH Values of Soils from the Nitrogen Availability Plots, 9–20
Bouyoucos, G. J. (paper), Relation between Heat of Wetting, Moisture Equivalent and Unfree Water, 431–434
Bouyoucos, G. J., and McCool, M. M. (paper), A Study of the Causes of Frost Occurrence in Muck Soils, 383–389
Brown, P. E. (paper), Soil Experiment Fields and their Value, 369–376
Bryan, O. C.—
Fred, E. B., and (paper), The Effect of Nodule Bacteria on the Yield and Nitrogen Content of Canning Peas, 413–415
Fred, E. B., and (paper), The Formation of Nodules by Different Varieties of Soybeans, 417–420
Burgess, P. S. (paper), The Soil Solution, Extracted by Lipman's Direct-Pressure Method, Compared with 1:5 Water Extracts, 191–215

Calcium Compounds and other Substances, Effect of Certain, on the Yield and Calcium Content of Some Crops (paper), O. M. Shedd, 233–246
Colloids—
adsorption of plant food by, 441–448, 449–457
Soil, Influence of, on Availability of Salts (paper), N. E. Gordon and E. B. Starkey, 1–7
Conn, H. J. (paper), A Microscopic Method for Demonstratng Fungi and Actinomycetes in Soil, 149–151

Diffusion, the nature of, in acid phosphate manufactured by the Lipman process,

Erdman, L. W. (paper), The Sulfur Content of Rainwater, 363–367
Experimental results, value of, 369–376

Fertilizer—
phosphatic limestone as a, 265–279
sulfur as a, for cotton, 435–440
value of field experiments on, 369–376
Flocculation, quantitative method for studying, 498
Frazier, W. C., and Fred, E. B. (paper), Movement of Legume Bacteria in Soil, 29–35

Fred, E. B.—
and Bryan, O. C. (paper), The Effect of Nodule Bacteria on the Yield and Nitrogen Content of Canning Peas, 413–415
and Bryan, O. C. (paper), The Formation of Nodules by Different Varieties of Soybeans, 417–420
Frazier, W. C., and (paper), Movement of Legume Bacteria in Soil, 29–35
Waksman, S. A., and (paper), A Tentative Outline of the Plate Method for Determining the Number of Microorganisms in the Soil. 27–28
Frost Occurrence in Muck Soils, A Study of the Causes of (paper), G. J. Bouyoucos and M. M. McCool, 383–389
Fungi in the Soil, Growth of (paper), S. A. Waksman, 153–157
Fungi, microscopic method for demonstrating, 149–151

Gardner, W., Jennings, D. S., Thomas, M. D., and (paper), A New Method of Mechanical Analysis of Soil, 485–499
Gericke, W. F. (paper), Differences Effected in Protein Content of Grain by Applications of Nitrogen Made at Different Growing Periods of the Plants, 103–109
Gordon, N. E.—
and Starkey, E. B. paper), Influence of Soil Colloids on Availability of Salts, 1–7
Starkey, E. B. and (paper), Influence of Hydrogen-Ion Concentration on the Adsorpton of Plant Food by Soil Colloids, 449–457
Wiley, R. C., and (paper), Adsorption of Plant Food by Colloidal Silica, 441–448
Greensand, sulfur oxidation in, 307–319

Helbronner, A., Rudolfs, W., and (paper), Oxidation of Zinc Sulfide by Microorganisms, 459–464
Hydrogen-ion concentration—
importance of, in making acid phosphate by the Lipman process, 479–483
of soil, effect of sulfur on, 247–263
relation of,
to adsorption by colloids, 1–7, 449–457
to crop yields, 12
to lime requirement, 11–12
variation of, 9–20

Iron pyrites, oxidation of, by bacteria, 135–147
Irrigation—
requirement of soils correlated with field moisture requirement and wilting point, 159–165
Water, Some Ways of Increasing the Duty of, (paper), W. L. Powers, 377–382

Jennings, D. S., Thomas, M. D., and Gardner, W (paper), A New Method of Mechanical Analysis of Soils, 485–499
Joffe, J. S. (paper), Acid Phosphate Production by the Lipman Process: I. Effect of Moisture Content of Sulfur-floats-soil Mixtures on Sulfur Oxidation Activities, 479–483
Joffe, J. S., and McLean, H. C. (paper), A Note on Oxidation of Sulfur in Oregon Soils, 217–221

Kelley, W. P. (paper), Variability of Alkali Soil, 177–189

Latshaw, W. L., Swanson, C. O. (paper), Sulfur as an Important Fertility Element, 421–430
Legume Bacteria in Soil, Movement of (paper), W. C. Frazier and E. B. Fred, 29–35
Leidigh, A. H., Reynolds, E. B., and (paper), Sulfur as a Fertilizer for Cotton, 435–440
Lime—
effect of, on soil flora, 321–346
requirement—
effect of soil acidity on, 15
relation of, to crop yields, 12
relation of, to pH values, 11–12
Limestone, phosphatic, as a fertilizer, 265–279
Lipman—
direct-pressure method for extracting soil solution, 191–215
process of acid phosphate manufacture, 479–483

McCool, M. M., Bouyoucos, G. J. and (paper), A Study of the Causes of Frost Occurrence in Muck Soils, 383–389
McLean, H. C., Joffe, J. S., and (paper), A Note on Oxidation of Sulfur in Oregon Soils, 217–221

Mechanical analysis of soil, new method of, 485–499
Microbiological Analysis of Soil as an Index of Soil Fertility: I. The Mathematical Interpretation of Results Obtained from a Study of the Numbers of Microörganisms in the Soil (paper), S. A. Waksman, 81–101
development of formula for probable error, 82–87
relation of number of plates to error, 89–92
relation of number of samples to error, 92–94
Microscopic Method for Demonstrating Fungi and Actinomycetes in Soil (paper) H. J. Conn, 149–151
Moisture as a factor in biological oxidation of sulfur, 479–483
Moisture-capacity of soils, 159–165
Mulch, nitrate accumulation under straw, 299–305

Nitrate Accumulation under Straw Mulch (paper), W. A. Albrecht, 299–305
Nitrates in soil—
relation of, to crop yields, 11–12
variation of, 9–20
Nitrification, effect of petroleum on, 465–477
Nitrogen—
content of peas, effect of nodule bacteria on, 413–415
effect of, on protein in grain, 103–109
Fixation in Arid Climates (paper), Wilsdon, B. H., and Ali, B., 127–133
relation to rainfall, 129
Nodule—
Bacteria, The Effect of, on the Yield and Nitrogen Content of Canning Peas (paper), E. B. Fred and O. C. Bryan, 413–415
formation, effect of sulfur on, 252–255
Nodules, The Formation of, by Different Varieties of Soybeans (paper), E. B. Fred and O. C. Bryan, 417–420

Oxygen, part played by, in biological oxidation of sulfur, 479–481

Petroleum, effect of, on soil flora, 465–477
Phosphate—
composting rock, with sulfur, 37–59
Acid, Production by the Lipman Process: I. Effect of Moisture Content of Sulfur-floats-soil Mixtures on Sulfur Oxidation (paper), J. S. Joffe, 479–481
Rock, reactions involved in conversion of, 479–480
Phosphates, effect of pyrites on availability of, 135–147
Phosphatic Limestone, Calcined, as a Fertilizer (paper), E. Van Alstine, 265–279
Phosphorus, relation of silica to assimilation of, 347–362
Plant—
composition, relation of silica and silicates to, 347–362
food—
adsorption of, by soil colloids, 441–448, 449–457
calcium as a, 233–246
growth—
effect of
arsenic on, 119–126
fertilizer at different periods of, 103–109
iron pyrites on, 143–145
magnesium, 233–246
silica and silicates on, 233–246
sulfur and acid phosphate on, 248–258
sulfur and rock phosphate on, 248–258
of soybeans, effect of sulfur on, 247–263
relation of silica and silicates to, 347–362
relation of soil moisture to physiological salt balance, 391–411
Plate Method for—
demonstrating soil fungi, 153–157
Determining the Number of Microorganisms in the Soil, A tentative Outline of the (paper), S. A. Waksman and E. B. Fred, 27–28
Potassium, availability of, effect of sulfur in greensand on, 307–319
Powers, W. L. (paper)—
Field Moisture Capacity and Wilting Point of Soils, 159–165
Some Ways of Increasing the Duty of Irrigation Water, 377–382
Prince, A. L., Blair, A. W., and (paper), Variation of Nitrate Nitrogen and pH Values of Soils from the Nitrogen Availability Plots, 9–20
Probable error in microbiological soil analysis—
development of formula for, 82–87

relation of number of plates, samples, and dilution to, 89–94
Protein—
Content of Grain, Differences Effected in the, by Applications of Nitrogen Made at Different Growing Periods of the Plants (paper), W. F. Gericke, 103–109
in grain, effect of nitrogen on, 103–109

Reynolds, E. B., and Leidigh, A. H. (paper), Sulfur as a Fertilizer for Cotton, 435–440
Rudolfs, W.—
and Helbronner, A. (paper), Oxidation of Zinc Sulfide by Microörganisms, 459–464
(paper), Composting Rock Phosphate with Sulfur in Slightly Calcareous, Soils; see Sulfur, Composting, etc. 37–59
paper), Influence of Sulfur Oxidation upon Growth of Soy Beans and its Effect on Bacterial Flora of Soil, 247–263
(paper), Oxidation of Iron Pyrites by Sulfur-Oxidizing Organisms, and their Use for making Mineral Phosphates Available; see Sulfur-Oxidizing Organisms, Oxidation of Iron Pyrites, etc., 135–147
(paper), Sulfur Oxidation in Inoculated and Uninoculated Greensand Mixtures and its Relation to the Availability of Potassium, 307–319
Rost, C. O. (paper), Occurrence of Sulfides in Minnesota Peat Soils, 167–174
Rothamsted, The Human Element in the Work at (reprinted from Agricultural Gazette), 175–176

Schollenberger, C. J. (paper), Silica and Silicates in Relation to Plant Growth and Composition, 347–362
Shedd, O. M. (paper), Effect of Certain Calcium Compounds and other Substances on the Yield and Calcium Content of Some Crops, 233–246
Shive, J. W. (paper), The Relaton of Soil Moisture to Physiological Salt Balance for Plants, 391–411
Silica and Silicates in Relation to Plant Growth and Composition (paper), C. J. Schollenberger, 347–362
Smith, E. S., Stewart, J., and (paper), Some Relations of Arsenic to Plant Growth: Part 2, 119–126
Soil—
colloids, adorption of plant food by, 441–448
Experiment Fields and Their Value (paper), P. E. Brown, 369–376
Fertility—
Micobiologcal Analysis of Soil as an Index of, II. Methods of the Study of Numbers of Microörganisms in the Soil (paper), Waksman, S. A., 283–305
limitations of methods, 285–287
soil sampling, 287
dilutions and plating, 287–288, 293–296
incubation and counts, 288–289, 290–292
influence of medium, 289–290, 292
diluent, 296
Microbiological Analysis of Soil as an Index of, III. Influence of Fertilization upon Numbers of Microorganisms in the Soil (paper), S. A. Waksman, 321–346
relation of titration curves to, 21–26
sulfur an element of, 42–430
Flora—
effect of sulfur on, 259–260
Modifications of the, Induced by Applications of Crude Petroleum (paper), I. L. Baldwin, 465–477
fungi, plate method for, 153–157
heat conductivity of, effect on frost occurrence, 383–389
microbiological analysis of, methods of, 283–305
microörganisms, effect of fertilizers on, 321–346
Moisture—
equivalent, heat of wetting and unfree water, relation between, 431–434
The Relation of, to Physiological Salt Balance for Plants, 391–411
muck—
frost occurrence in, 383–389
sulfides in, 167–174
peat, sulfides in, 167–174
Reaction—
effect on sulfides in peat and muck soils, 167–174

effect of sulfur on, 217–221
effect of sulfur on, 243–263
The Influence of, upon the Growth of Actinomycetes causing Potato Scab (paper), S. A. Waksman, 61–79
effect of acidity on various strains, 63–68
resistance of saprophytic species, 68–71
sulfur control, 73–76
Solution—
Extracted by Lipman's Direct-Pressure Method, Compared with 1:5 Water Extracts, The (paper), P. S. Burgess, 191–215
Variability of Alkali, (paper), W. P. Kelley, 177–189
Soils—
A New Method of Mechanical Analysis of (paper), D. S. Jennings, M. D. Thomas, and W. Gardner, 485–497
Field Moisture Capacity and Wilting Point of (paper), W. L. Powers, 159–165
The Potential Acidity of (paper), O. Arrhenius, 223–232
buffer action of, and relation to fertility 223–232
potential acidity of and relation to fertility, 223–232
Starkey, E. B.—
and Gordon, N. E. (paper), Influence of Hydrogen-Ion Concentration on the Adsorption of Plant Food by Soil Colloids, 449–457
Gordon, N. E., and (paper), Influence of Soil Colloids on Availability of Salts, 1–7
Stewart, J.—
(paper), Some Relations of Arsenic to Plant Growth: Part 1, 111–117
and Smith, E. S. (paper), Some Relations of Arsenic to Plant Growth: Part 2, 119–126
Straw mulch, nitrate accumulation under 299–305
Sulfides in Minnesota Peat Soils, Occurrence of (paper), C. O. Rost, 167–174
Sulfur—
as an Important Fertility Element (paper), C. O. Swanson and W. L. Latshaw, 421–430
as a Fertilizer for Cotton (paper), E. B. Reynolds and A. H. Leidigh, 435–440
Composting Rock Phosphate with, in Slightly Alkaline Calcareous Soils (paper), W. Rudolfs, 37–59
influence of—
light, 39–42
peptone, 39–42
temperature, 39–42
partial sterilization, 44–46
reducing quantity of sulfur, 49–50
initial reaction, 50–51
aeration, 51–56
stimulation by salts, 42–44
$(NH_4)_2SO_4$ as source of nitrogen, 47–49
control of scab by, 73–76
Content of Rainwater, The (paper), L. W. Erdman, 363–367
effect of—
inoculation of, 217–221
on nodule formation, 252–255
on soil reaction, 73, 243–263
moisture on biological oxidation of, 479–483
reactions involved in biological oxidation of, 479–481
with acid phosphate, on plant growth, 248–258
with rock phosphate, on plant growth, 248–258
in Oregon Soils, A Note on Oxidation of, (paper), J. S. Joffe and H. C. McLean, 217–221
method for determining, in soil, 421–430
Oxidation (see Zinc Sulfide, Oxidation of, etc.), 459–464
in Inoculated and Uninoculated Greensand Mixtures and its Relation to the Availabiliy of Potassium (paper) W. Rudolfs, 307–319
Influence of, upon Growth of Soy Beans and its Effect on Bacterial Flora of Soil (paper), W. Rudolfs, 247–263
Sulfur-Oxidizing Organisms, Oxidation of Iron Pyrites by, and their Use for Making Mineral Phosphates Available (paper), W. Rudolfs, 135–147
$(NH_4)_2SO_4$ as source of N, 140–141
effect of aeration, 141–143
effect of pyrites on plant growth, 143–145
Swanson, C. O., and Latshaw, W. L. (paper), Sulfur as an Important Fertility Element, 421–430

Titration Curves, A Possible Correlation between the Fertility of Rice Soils and their Titration Curves (paper), O. Arrhenius, 21–26
Thomas, M. D., and Gardner W., Jennings, D. S., (paper), A New Method of Mechanical Analysis of Soils, 485–499

Unfree water, discussion of, 191–215

Variability of alkali soil, 177–189
Variation of Nitrate Nitrogen and pH Values of Soils from the Nitrogen Availability Plots (paper), A. W. Blair and A. L. Prince, 9–20
Van Alstine, E. (paper), Calcined Phosphatic Limestone as a Fertilizer, 265–279

Waksman, S. A. (papers)—
Microbiological Analysis of Soil as an Index of Soil Fertility: I. The Mathematical Interpretation of Results Obtained from a Study of the Numbers of Microörganisms in the Soil; see Microbiological Analysis, etc., 81–101
Microbiological Analysis of Soil as an Index of Soil Fertility: II. Methods of the Study of Numbers of Microorganisms in the Soil, see Soil Fertility, Microbiological Analysis as an Index, etc., 283–305
Microbiological Analysis of Soil as an Index of Soil Fertility: III. Influence of Fertilization upon Numbers of Microörganisms in the Soil, 321–346
The Growth of Fungi in the Soil, 153–157
The Influence of Soil Reaction upon the Growth of Actinomycetes Causing Potato Scab, see Soil Reaction, The Influence of, etc., 61–79
and Fred, E. B. (paper), A Tentative Outline of the Plate Method for Determining the Number of Microorganisms in the Soil, 27–28
Water—
extracts compared with solutions, direct-pressure, 191–215
irrigation, increasing duty of, 377–382
Unfree, Relation between Heat of Wetting, Moisture Equivalent and (paper), G. J. Bouyoucos, 431–434
Wiley, R. C., and Gordon, N. E. (paper), Adsorption of Plant Food by Colloidal Silica, 441–448
Wilsdon, B. H., and Ali, B. (paper), Nitrogen Fixation in Arid Climates, 127–133
Wilting point of soils, 159–165

Zinc Sulfide, Oxidation of, by Microörganisms (paper), W. Rudolfs and A. Helbronner, 459–464
